MONITORED EMERGENCY CALL SYSTEMS

Monitored emergency call systems (ECS) provide 24/7 access to assistance through a call centre. All supplier monitored ECS should include:

- Ongoing monitoring service with two-way voice contact through a high quality speaker phone.
  - In an emergency, the user speaks to a staff member trained in emergency response at a 24 hour monitoring centre. The service will call a family member, friend, relative or emergency services depending on the situation and how your service has been set up.
- Initial set-up cost and an ongoing fee for monitoring (paid weekly or monthly), which includes a pendant, and hire of a base unit.
- Operation through the phone line or a GSM sim card if there is mobile coverage in the area.
- Battery backup.

Some providers at request can also offer additional services, including:

- Fall detector pendants which can automatically raise an alarm after a fall is sensed by the worn device.
- Reminders to take medication or attend appointments.
- Daily welfare calls.
- Peripheral monitoring: sensor alert responses to inactivity, flood, smoke, gas, seizure or incontinence as required.
- Solutions to overcome hearing loss, sight impairment and limited mobility.

There are alternative options such as purchaser monitored ECS, for detail see LifeTec’s factsheet on Purchaser Monitored Emergency Call Systems. The Australian Red Cross provides a service called Telecross which provides daily welfare calls, for detail call 1300 885 698.
